EDUCATION

Year	Degree/Examination	Institute/Board	CGPA/Percentage
2022–Present	B.Tech in Electrical Engineering	IIT Roorkee	7.86
2022	Intermediate (Class XII)	Surmount International School	97.6%
2020	Matriculate (Class X)	Surmount International School	95%

TECHNICAL SKILLS

Languages	Python, C/C++, SQL, JavaScript
Data Science & ML	Machine Learning, Deep Learning, NLP, Computer Vision, Time Series Analysis, Anomaly Detection, Regression, Classification, EDA, Data Visualization
Frameworks	PyTorch, TensorFlow, scikit-learn, NumPy, Pandas, Matplotlib, Plotly, Seaborn, OpenCV, FastAPI, React, Vite
Databases	MySQL, PostgreSQL
Tools & Platforms	AWS (EC2, S3, Lambda), Git, GitHub, Docker, Streamlit, Power BI, Excel, Jupyter, Google Colab, Netlify, Groq, Tavily

WORK EXPERIENCE

Data Science Intern

Evoastra Ventures | December 2025 – February 2026 | [GitHub](#)

- Built production-ready anomaly detection system for commercial building energy consumption using Isolation Forests and LSTM autoencoders, achieving 20–40% faster detection and simulating \$50K–\$200K annual cost savings per building
- Developed automated web scraping pipelines using Python (BeautifulSoup, Selenium) to collect and preprocess 10,000+ real-world energy consumption records, reducing manual data collection time by 80%
- Performed exploratory data analysis on multivariate time-series data to identify consumption patterns and anomalies, delivering actionable insights that informed model architecture decisions
- Collaborated with cross-functional team of engineers to iterate on ML prototypes, implementing ensemble methods that improved detection accuracy by 15% compared to baseline models

PROJECTS

Meeting Copilot — Real-time AI Meeting Assistant [GitHub](#) | [Demo](#)

March 2026

- Built a browser-based AI meeting assistant that transcribes live audio using Groq Whisper Large V3, generating 3 contextual suggestions every 30 seconds from a rolling transcript window
- Engineered stop/restart MediaRecorder chunking strategy to ensure reliable audio capture across browsers, replacing the unreliable timeslice approach that caused silent gaps
- Designed a 3-prompt LLM architecture separating suggestion generation, detailed answers, and freeform chat — each with tuned context windows (3 min vs 10 min) to balance relevance and depth
- Integrated Groq LLM streaming API (Llama 3.3 70B) for sub-300ms first-token latency; deployed on Netlify with zero backend infrastructure using React + Vite

Multimodal Real Estate Valuation System [GitHub](#)

October 2025 – November 2025

- Engineered multimodal ML pipeline integrating tabular housing data with satellite imagery, extracting neighborhood visual embeddings via CNN transfer learning from 16,000+ property records
- Achieved 89% predictive accuracy ($R^2 = 0.89$) by fusing image embeddings with 15+ structured features using ensemble regression methods
- Implemented Grad-CAM visualization to interpret which visual features most influenced price predictions, enhancing model explainability for stakeholders

Social Media Analytics Tool

June 2025 – August 2025

- Developed real-time sentiment analysis pipeline processing 1,000+ daily comments from YouTube and Reddit using NLP (VADER, BERT), achieving 94% classification accuracy
- Built scalable ETL pipeline with Pandas and PostgreSQL to ingest, clean, and store streaming data, reducing query time by 60% through optimized database indexing
- Deployed cloud-hosted dashboards on AWS (EC2, S3) with interactive Plotly visualizations showing sentiment trends and hashtag analytics, enabling real-time monitoring

EXTRA CURRICULARS

Competitive Programming — Online Judges

- Solved 1000+ algorithmic problems, demonstrating strong problem-solving skills. Regularly participates in coding challenges to enhance proficiency in various algorithms and data structures
- Codeforces (Specialist , peak rating-1456) , Leetcode (300+ problems solved)
